In my house we never really leave any light on.
On the holidays we just leave the decoration lights
on so we can see what we done and the great job
we did. How we usually conserve the power is sometimes,
we would just leave a night light on at night and
during the morning we only have to leave the kitchen
light on to see there. We have two doors, a front door
and the back door we open them and the light from
outside would light up the whole house. During the
evening all the light will go on. Then after every body is
done with everything they need to do we would turn
off some lights.

Lornetcourg
i save energy by turning off lights to save
energy, make sure that the water is off so
we wont waste energy turn off the A/S
to save power

Jermalyn.T

about my Family were
Really chill to eachother.,
and Sometime we can be
mad at eachother., we can
also make Fun to each other.
next what we do when where
Home we can sleep wake
up eat, shower, go outside
For a while and we go back
in and watch movie.

How to save my energy

by: Junior Luette

We save our energy by turning off the light and on it when we need it and make sure everthing is not on and at night we make sure People eat and sleep before turning off all the light

I save energy power at home by turning off the ac when I go to sleep. Also in the morning when the light comes in through the window, I don't turn on the light and save the power.
At school I don't use the phone so I wont need to use the charger to charge it.

JAUL-eah santos

I save power at home by using
candles or flashight and
use a fan for Air.

I save power at school by
not using the outlet, don't go
on my phone.

The way I save energy is by keeping the lights off when they aren't needed. I turn off the air con when ever I leave the house even if it makes a small difference. Instead of using a drying matchine I hang the clothes and let it air dry. keeping my phone off at school is another thing. At school you can just stay outside rather than going into classrooms for the air con.

Glenn Fay

~~I save energy from not talking and sleeping in class and at home~~

I save power by turning off the air conditioner when I go to school and not turning on the lights because the sun is already going through my window. And at night I see street lights so I am not scared.

Savannah
Blas

to save power you have to always turn off whatever you use like lights, and instead of playing inside and do video games you can go outside and play

I save power at home by turning off
the light when I leave my room
and I don't turn on my air con
until I go to bed. I save power
at school by turning off the light
when I leave a class.

How I save Energy
I save energy by turning off the light when I sleep.
Barly go on electronics so I won't keep charging.
I eat to kill time, I draw, I sing, and dance. I
also talk to my family about life

I save energy at school by, not going on my Phone
all the time. Do my classwork, Do homework, Hang out with
friends, lastly, not use outlets at school

Kanai how i save energy at home and at school
i charge my phone to 100 percent then i take
it off to save power when i choose food in
the frigde i think what to get so i can
close the frigde faster to save power and
when i go out i turn the lights off.

How I save energy

I save energy at home and at school by not moving around a lot. I also use power banks to charge my phone and I barely use any other electronics. I only use the lights at night and turn it off when I don't need it. I hang my clothes instead of using a dryer and I wash the dishes myself instead of using a diswasher.
When my phone runs out of battery abschool instead of asking the teachers if I can charge my phone. I wait until I get home to charge it
